Art Unit: 2759

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to the connection of terminals, classified in class 439, subclass 64.
- II. Claims 10-12 and 17-21, drawn to preparation of a translation table, classified in class 711, subclass 206.
- III. Claims 13-14, drawn to allocation based on boundaries, classified in class 711, subclass 172.
- IV. Claims 15-16, drawn to status condition management, classified in class 711, subclass 156.
- V. Claim 22, drawn to data error correction, classified in class 714, subclass 718.

Invention I and inventions II-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in any memory system without a translation table or boundary conditions or status management or error correction. See M.P.E.P. § 806.05(d).

Invention II and inventions I & III-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as in any memory system without the particulars of terminal connections or boundary conditions or status management or error correction. See M.P.E.P. § 806.05(d).

Art Unit: 2759

Invention III and inventions I-II & IV-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as in any memory system without the particulars of terminal connections or a translation table or status management or error correction. See M.P.E.P. § 806.05(d).

Invention IV and inventions I-III & V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention IV has separate utility such as in any memory system without the particulars of terminal connections or a translation table or boundary conditions or error correction. See M.P.E.P. § 806.05(d).

Invention V and inventions I-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention V has separate utility such as in any memory system without the particulars of terminal connections or a translation table or boundary conditions or status management. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2759

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry of a general nature or relating to the status of this application should be directed to the technology center receptionist whose telephone number is **(703) 305-9600**.

Direct any inquiries concerning drawing review to the Drawing Review Branch (703) 305-8404.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David L. Robertson whose telephone number is (703) 305-3825.
